PROFILE

Backend engineering built around bounded contexts

PHP developer with 10+ years of experience building scalable backend systems. Hands-on experience applying Domain-Driven Design (DDD), hexagonal architecture, CQRS and Event Sourcing organized by bounded contexts, with messaging via Symfony Messenger, Kafka and AWS SQS. Comfortable operating on AWS with Kubernetes, Docker and Helm, and applying AI (Claude Code) to automate code review and team conventions.

[PHP 8.3+] [Symfony] [DDD/Hexagonal] [CQRS] [Event Sourcing] [Kafka] [AWS-EKS] [Kubernetes]

ARCHITECTURE DECISIONS

Relevant cases, ADR format

ADR-01 · THN (The Hotels Network) IN PRODUCTION

Event Sourcing with snapshots per bounded context

CONTEXT

Multiple bounded contexts needed a reliable history of business changes and the ability to reconstruct state at any point in time, without penalizing read performance.

DECISION

Event store with periodic snapshots + CQRS, splitting command, query and event buses with Symfony Messenger. Cross-context streaming via Kafka; AWS SQS with dead-letter queues for resilience.

OUTCOME

Auditable state reconstruction, real decoupling between contexts, and fewer data-consistency incidents.

ADR-02 · THN (The Hotels Network) IN PRODUCTION

Claude Code agents for convention auditing

CONTEXT

Keeping team conventions consistent (PHPStan level 9, PSR-12, DDD/hexagonal patterns) was becoming increasingly costly to review manually as the team grew.

DECISION

Designed specialized skills and agents with Claude Code, with MCP integrations, to automate code review, convention auditing and data diagnostics.

OUTCOME

Less time spent on repetitive style/convention reviews; human reviews focused on design and business logic.

ADR-03 · Promofarma COMPLETED

CQRS + Event Sourcing in a high-volume system

CONTEXT

Complex business domains with high transaction volume needed to separate reads and writes to maintain consistency without bottlenecks.

DECISION

Domain modeling with DDD and CQRS implementation, with asynchronous service-to-service communication via Kafka within a microservices architecture.

OUTCOME

Guaranteed data traceability, with reads and writes scaled independently.

ADR-04 · Atrápalo / Drinks and Co COMPLETED

Progressive monolith refactor towards Domain-Driven Design

CONTEXT

PHP 5 codebases, with business logic tightly coupled to infrastructure and framework code, with no clear boundaries between domains, made the product increasingly difficult to evolve and maintain as it grew.

DECISION

Progressive process carried out alongside the PHP version migration (5 → 7 → 8): extracting business logic from infrastructure, identifying the natural bounded contexts within the monolith, and applying best practices and clean code (strict typing, removing dead code, reducing coupling) in each migrated module.

OUTCOME

Monolith incrementally transformed into a more domain-oriented, modular architecture, on a modern and maintainable codebase, without service downtime or a full rewrite.

TEAM

Technical mentoring

SUPPORTING DDD, HEXAGONAL AND CQRS ADOPTION

At THN, part of the role has involved helping the team internalize the codebase's architectural patterns: reviewing bounded-context designs with more junior developers, explaining the reasoning behind conventions audited by Claude Code agents, and supporting the team through the progressive migration to PHPStan level 9.

CAREER

10+ years building backend systems

NOVEMBER 2021 — PRESENT

Senior Backend Developer

THN (The Hotels Network) — acquired by Lighthouse

- DDD, hexagonal architecture, CQRS and Event Sourcing organized by bounded contexts.
- Symfony Messenger, Apache Kafka and AWS SQS with dead-letter queues.
- MongoDB, Redis, AWS S3. Kubernetes (EKS, kubectl), Docker, Helm, CircleCI.
- PHPStan level 9, PHP CS Fixer (PSR-12), Codeception. Datadog, LaunchDarkly.
- Designed skills and agents with Claude Code and MCP integrations.

2020 — 2021

Backend Developer

Promofarma

- CQRS and Event Sourcing in a high-volume system.
- DDD applied to complex business domains. Microservices with Kafka.

2019 — 2020

Backend Developer

Drinks and Co

- PHP/Symfony. MySQL, MongoDB and RabbitMQ.
- Refactored business modules towards Domain-Driven Design, alongside the PHP 7 to 8 migration, separating domain from infrastructure and applying best practices and clean code.

2018 — 2019

Backend Developer

Colvin

- CQRS and Event Sourcing to separate reads and writes with a reliable change history.

2016 — 2018

Full Stack Developer (PHP + Backbone + JS)

Atrápalo — Leisure

- DDD principles applied to the flights department's APIs. Event-driven communication via RabbitMQ.

- Progressive monolith refactor towards Domain-Driven Design, alongside the PHP 5 to 7 migration: separating domain from infrastructure, identifying bounded contexts, and applying best practices and clean code.

MARCH 2016 — AUGUST 2016

Front-End Developer (AngularJS)

Underbike, SL (Start-up) — Cycling

- Owned the front-end of a CRUD API built with AngularJS.

AUGUST 2015 — MARCH 2016

Full Stack Developer (Java + JS + AngularJS)

Fujitsu Spain — Electronics

- Development and maintenance of La Caixa's ATM systems.

FEBRUARY 2015 — JUNE 2015

Front-End Developer (AngularJS)

IN2, Ingeniería de la Información — Consulting

- Front-end development for Laboratorios Esteve. Scrum, Bitbucket, Jira.

DECEMBER 2012 — JANUARY 2015

Full Stack Developer (PHP + JS)

Consulnet Strategic and Solutions Spain, SL

- New websites and maintenance of a betting website.

JULY 2012 — DECEMBER 2012

Full Stack Developer (PHP + JS)

Espais Telemàtics, SL

- Development and maintenance of several websites.

EDUCATION

Academic background

BSc in Computer Engineering

UOC · 2016 — Present

Higher Vocational Diploma in IT Application Development

INS La Pineda, Badalona · 2010 — 2012

STACK

Technical skills

ARCHITECTURE

DDD · Hexagonal · CQRS · Event Sourcing · Bounded Contexts · Microservices

LANGUAGES AND FRAMEWORKS

PHP 8.3+ · Symfony · TypeScript · Java · Go · GraphQL

MESSAGING AND STREAMING

Symfony Messenger · Apache Kafka · AWS SQS · RabbitMQ

DATA AND STORAGE

MongoDB · MySQL · Elasticsearch · Redis · AWS S3

CLOUD AND INFRASTRUCTURE

AWS · Kubernetes (EKS, kubectl) · Docker · Helm

CI/CD AND QUALITY

CircleCI · GitLab · Jenkins · PHPStan L9 · PHP CS Fixer (PSR-12) · CaptainHook

TESTING

Codeception · Behat · Cypress

OBSERVABILITY AND FEATURE FLAGS

Datadog (APM, logs, DDSQL) · LaunchDarkly

AI APPLIED TO DEVELOPMENT

Claude Code — skill and agent design · MCP integrations

TOOLS

Git/GitHub · GitLab · Jira · Confluence

LANGUAGES

Catalan and Spanish (native) | **English** (B1)
